I-VMS DEVICE TESTING: SPECIFICATION OF REQUIREMENTS

This Section sets out the Authority's requirements.

1. What is I-VMS?

I-VMS is a vessel monitoring device that records GNSS positional information of the device's location (including additional information such as date, time, speed, course, and device status) and transmits the data via GMS/GPRS services in real time and at a high frequency rate. The reports are subsequently delivered in real-time to the relevant Marine Management Organisation (MMO) and Inshore Fisheries Conservation Authorities (IFCA) officers in order to monitor types of fishing activities within English waters.

The MMO was asked to initiate a project, working closely with the Inshore IFCA's, to coordinate the further development and use of such I-VMS systems to ensure that their potential can be fully maximised. The principal aim of the project was the production of a type approval I-VMS specification for fishing vessels under 12 metres in overall length. In August 2021 the MMO announced the I-VMS type approval process and evaluated a number of tracking devices seeking MMO I-VMS type approval status. Four devices were subsequently approved November 2021 after completing the evaluation process.

Further details of the approval process and the I-VMS device specification of requirements can be found at: <https://www.gov.uk/guidance/i-vms-type-approval-programme>

In addition, the list of I-VMS approved devices can be found here:

<https://www.gov.uk/guidance/list-of-i-vms-type-approved-devices-for-under-12-metre-english-vessels>

The intention of this tender is to provide additional assurances to the MMO and fishing industry that the evaluated devices are in line with the I-VMS specification of requirements and in line with the supplier device statements presented to the MMO.

2. Scope

I-VMS Device Testing Requirements

As part of an ongoing device assurance process, the Contractor shall be required to undertake the following testing during the contracted period:

- GNSS accuracy & differential GPS/GNSS augmentation.
- GNSS blackout testing
- Tampering tests and interrogation of devices
- Multi constellation GNSS performance

- Power management (the ability to handle power fluctuations)
- IP67 water ingress testing

Additional Testing requirements (outside of the I-VMS approval process)

In order to provide the MMO and IFCA's with a better understanding of the resilience of I-VMS devices to tampering, the Contractor shall also be required to undertake the following testing:

- Resilience to jamming and interference
- Additional GNSS blackout testing

3. General Requirements

Timelines for Testing

The Contractor will be required to test the four I-VMS approved device to ensure they are capable of meeting the I-VMS specification of requirements as stated. The Contractor shall be required to complete all testing on a device within the agreed testing period, to be agreed prior to contract signature.

Delivery of Devices

The Contractor shall be required to confirm a UK postal address for receipt of the devices. The cost of initial delivery to the address specified by the Contractor shall be met by the MMO.

On completion of testing, the Contractor shall return the device to the MMO by recorded delivery to the I-VMS postal address stated below. This shall be at the Contractor's cost.

I-VMS postal address:

████████████████████
 I-VMS Project
 Marine Management Organisation
 Lancaster House
 Hampshire Court
 Newcastle upon Tyne
 NE4 7YH

It shall be the Contractor's liability to ensure the products safety during possession of the device. All devices must be returned to the MMO in the same functioning order as they were received.

Reporting

The Contractor shall provide a full report on conclusion of testing of each device. This shall be delivered in such a way that it provides the MMO full comfort that testing has been carried out robustly. The report shall provide details of the testing methodology, the levels of testing, as well as the results and findings. Where tests cannot be classed directly as a pass or fail, the Contractor shall be required to adopt a confidence threshold scale as a guide for performance tests (e.g., for a multi constellation GNSS performance test). These threshold scales will be agreed between MMO and the Contractor on award of the Contract.

Availability

The Contractor must ensure that required facilities and staff are available during the agreed testing period.

Order of test

The tests must be conducted in the following priority order

- IP67 water ingress testing
- Power management (the ability to handle power fluctuations)
- GNSS accuracy & differential GPS/GNSS augmentation.
- GNSS blackout testing
- Multi constellation GNSS performance
- Tampering tests and interrogation of devices

Test Failures & Re-Testing Failed Devices

If a device fails any of the testing requirements the Contractor shall immediately notify (by telephone) the MMO I-VMS project team (contact details will be supplied upon award of Contract). The Contractor shall also provide written confirmation (by email) including:

- Details of the device
- The test failure
- Failure time
- How the failure was identified
- Whether any other tests can be conducted in the meantime, that are not affected by the fault.

MMO shall be responsible for managing the relationship with product suppliers. If a test failure is identified, MMO will liaise with the product supplier and then confirm to the

Contractor whether to continue with testing, pause or cease testing the affected device. If the MMO instruction is to cease testing the MMO will pay only for the tests conducted.

MMO may give product suppliers the opportunity to rectify a test failure through firmware upgrades/modifications. In some cases, the testing programme shall be paused. If the failure can be resolved by the product supplier within a reasonable timeframe agreed by the MMO, then the Contractor shall resume the testing programme.

If there are continuing issues, each test failure will be considered on a case-by-case basis. If the issue cannot be rectified, the product supplier will be deemed unable to validate that the product meets the I-VMS specification of requirements. The MMO will be responsible for communication with the product supplier.

If, in order to rectify a test failure, the device must be returned to the product supplier, the product supplier will be responsible for any delivery costs incurred. The product supplier may request that the device is returned. In this instance, any additional postage costs incurred by the Contractor shall be chargeable to MMO.

Provisions

In order to carry out the tests outlined; the Contractor may require access to the transmitted data of the I-VMS device. The MMO intends to provide the Contractor with a portal to evaluate the data via the VMS operational hub. Further details of these will be provide on Contract Award.

4. I-VMS Device Testing Requirements

Unless otherwise stated all requirements are mandatory.

IP67 (Water Ingress Protection Testing)

The contractor will be required to test each model of device submitted and validate whether the devices meet the IP67 standards.

An IP67 rating will show that the device meets the standard ingress protection (IP) rating for consumer products, meaning they are dust tight and protected against submersion in water for up to 1 metre for up to 30 minutes.

Information on IP rating can be accessed from the International Electrotechnical Commission (IEC)

www.iec.ch/ip-ratings

GNSS Augmentation and positional accuracy

The I-VMS specification of requirements¹ (Section 4.1(a) Positional Requirements) states

¹ I-VMS Device Specification can be found here [I-VMS type approval programme - GOV.UK \(www.gov.uk\)](http://www.gov.uk)

“The I-VMS devices must employ a GNSS augmentation accurate to +/- 5m to meet national reporting requirements.”

The device must demonstrate that: 50% of all reports must be accurate to +/-5m. 95% of all reports must be accurate to +/-10m”

The Contractor shall test the following functionality:

- 50% of all reports must be accurate to +/-5m
- 95% of all reports must be accurate to +/-10m
- Tested against
 - (1) device mains power,
 - (2) alternative power if marketed with device, (e.g., solar or portable power bank)
 - (3) internal battery and
 - (4) during power fluctuations.
- The I-VMS device’s GNSS accuracy, using fully repeatable environmental conditions which mirror the conditions expected to face when the I-VMS device in a ‘live’ environment.
- Does the accuracy degrade to below the required levels when the device is not installed with a clear line of sight i.e., in a wheelhouse? Can it be affected by unwanted levels of signal obscuration if not installed in a suitable location?

Based on these requirements the tests must be able to provide reliable measures of horizontal accuracy in representative conditions.

The tests must be repeatable so that it is possible to compare performance between different device power situations as outlined above. The same techniques must be applied to all devices.

It is expected that the measured horizontal position accuracy will better than 5m (at 50% level) in all tests.

GNSS Blackout Testing

In order to determine the level of performance of each I-VMS device, the Contractor shall carry out a test for blackout and antenna obstruction. The Contractor shall test the following functionality:

- Physical Shielding of Antenna - check what happens when physically shield the antenna to block signals - should get a warning of loss of GNSS, certainly should not get high errors without any sort of warning.

- Complete Loss of Signals - check what happens when no signals are received by the receiver - should get a warning of loss of GNSS, certainly should not get high errors without any sort of warning
- Position reports with marginal numbers of satellites - Position reports with marginal numbers of satellites: We expect that if more than 4 GPS satellites are in view (or 5 or more GPS + Glonass) then a valid position report will be generated. Conversely, if less than 4 satellites are available, we expect the status to indicate 'no GPS fix'.

This ensures the robustness of a device, and it exhibits the correct behaviour when the GPS and/or GSM signal is not available in line with the I-VMS specification.

Tampering Tests and Interrogation of Devices

To determine whether the I-VMS device can meet requirements in the specification of requirements (sections 3.3f,g and 4.1b), the Contractor shall test the following functionality:

- Demonstrate that external casing of the I-VMS device is physically sealed before being installed, and the means provided to detect any unauthorised opening or other physical interference or ingress of the I-VMS device. As a minimum, this must consist of a sensor in the device that detects when it is opened and transmits a position report with the appropriate event status code when the communication link(s) are re-established.
- Once the I-VMS device is sealed, any adjustments or reconfiguration to scripts, reporting frequencies and other software functionality must only be possible via a communications link by the device supplier and by engineers authorised by the supplier opening the I-VMS device on board the vessel.
- There is to be no external input to the positioning system, such that it must not be possible to change the positional fix by manual intervention.

The test will examine both aspects of physical tampering and interrogation as well as use of electronic means.

In relation to the physical/manual tampering, the inspection shall examine the exterior of the device and identify markings related to the construction and assembly process of the casing and how the enclosure is attached to the internal board/modules. The process shall also identify any visible physical seals. All visible external physical features, joints, fixings (including screws, clips etc.) and connectors shall be identified and analysed for their purpose, including:

- Diagnostics ports
- Antenna connectors (e.g., GNSS, DGNS, GPRS)
- Electrical Power connectors
- Airflow ducts etc.
- Switches (including on/off, factory reset)
- Any output cables/connectors (e.g., external display, data download)

- Any input cables/connectors (e.g., from external navigation device, markers, or other sensors)

The device should be opened for a visual inspection of the interior. Any physical (or electronic) sealing or shielding and anti-tamper components (security micro-switch) shall be located, identified, and documented. The inspection shall continue to identify the quality and robustness of the construction and the components' critical modules including:

- Processor
- data streams, memories, and storage (solid state and removable)
- GNSS module (and augmentation)
- GPRS/communications module
- other components of interest to other tests, e.g., power distribution, protection etc.
- other components (e.g., Bluetooth, Wi-Fi, etc. that could present a vulnerability)

In terms of electronic tamper, the inspection test shall identify all wired and wireless interfaces and analyse their purpose and the opportunity for attack or spoofing.

In both attack scenarios (physical/manual and electronic) the tester shall be seeking to gain assurance that the opportunity for tamper and interrogation (deliberate or otherwise) is minimal and that protective measures have been implemented to ensure the reliability of the device and prevent the following:

- Interfacing the device to another device (or emulator)
- Interfacing the device to external modules or components
- Removing components, data and/or software
- Replacing components, data and/or software

The analysis will rely on an inspection of the device as well as an inspection of the documentation received from the manufacturer.

Power Management

The I-VMS specification of requirements (Section 3.4.1) states all I-VMS devices must “be able to cope with power fluctuations likely to be experienced on board fishing vessels without any degradation to performance”.

The Contractor shall test the following functionality:

- Demonstrate that the I-VMS Device is able to cope with power fluctuations likely to be experienced on board fishing vessels without any degradation to performance. Tests must show the device;
 - works across a range of voltages typically in use by fishing vessels at sea, as a minimum coping with variations between 8 to 36 volts, allowing a nominal supply of 12V or 24V DC
 - is protected from: voltage surge, voltage spiking, and reverse polarity events

- has a power conditioner (also known as a line conditioner or power line conditioner) which improves the quality of the power that is delivered to the I-VMS device.
- Demonstrate the life of the rechargeable battery and that it is capable of providing a minimum of 1,000 VMS reporting transmissions when relying upon battery power alone;
- Demonstrate that when the rechargeable battery power falls below the level required to sustain transmissions, the I-VMS Device maintains its settings at that point;
- Demonstrate that when primary power is restored the I-VMS Device is able to recommence normal functioning with the settings in place at loss of power and not with any default factory settings;
- Demonstrate that the rechargeable battery within the I-VMS device is fully capable of meeting all other type approval and additional tests specified and maintains performance whether on battery or mains power.

Additional Testing Requirements

Resilience to jamming and interference

The Contractor shall test the following functionality:

- Demonstrate how prone the I-VMS device may be to tampering and how this may impact on the frequency of reports;
- Demonstrate how resilient the I-VMS device is to jamming signals;
- Demonstrate how prone the I-VMS device may be to tampering which alters or defaults the positional reports.
- Demonstrates how resilient the I-VMS device is to spoofing methods intended to fool the GNSS receivers; and
- Demonstrate common reporting patterns, processes, or methods by which regulating bodies may be able to identify tampering including jamming and spoofing.

Further GNSS Blackout Testing

The Contractor shall test the following functionality:

- Evaluate and test the performance of the I-VMS device with GPS degradation and interference, identifying what, if any, functionality is impaired.

3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.

4.2 Goods clauses

- (a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.
- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.
- (j) The Supplier will notify the Authority of any request that Goods are returned to it or the manufacturer after the discovery of safety issues or defects that might endanger health or hinder performance and shall indemnify the Authority against the costs arising as a result of any such request. Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.
- (k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.

4.3 Services clauses

(a) Late delivery of the Services will be a breach of the Contract.

(b) The Supplier must co-operate with the Authority and third party suppliers on all aspects connected with the delivery of the Services and ensure that Supplier Staff comply with any reasonable instructions including any security requirements.

(c) The Authority must provide the Supplier Staff with reasonable access to its premises at such reasonable times agreed with the Authority for the purpose of supplying the Services.

(d) The Supplier must at its own risk and expense provide all equipment required to deliver the Services. Any equipment provided by the Authority to the Supplier for supplying the Services remains the property of the Authority and is to be returned to the Authority on expiry or termination of the Contract.

(e) The Supplier must allocate sufficient resources and appropriate expertise to the Contract.

(f) The Supplier must take all reasonable care to ensure performance does not disrupt the Authority's operations, employees or other contractors.

(g) On completion of the Services, the Supplier is responsible for leaving the Authority's premises in a clean, safe and tidy condition and making good any damage that it has caused to the Authority's premises or property, other than fair wear and tear and any pre-existing cleanliness, safety or tidiness issue at the Authority's premises that existed before the commencement of the Term.

(h) The Supplier must ensure all Services, and anything used to deliver the Services, are of the required quality and free from damage or defects.

(i) The Authority is entitled to withhold payment for partially or undelivered Services or for Services which are not delivered in accordance with the Contract but doing so does not stop it from using its other rights under the Contract.

5. Pricing and payments

5.1 In exchange for the Deliverables delivered, the Supplier shall be entitled to invoice the Authority for the charges in Annex 3. The Supplier shall raise invoices promptly and in any event within 90 days from when the charges are due.

5.2 All Charges:

- (a) exclude VAT, which is payable on provision of a valid VAT invoice and charged at the prevailing rate;

- (b) include all costs connected with the supply of Deliverables.

5.3 The Authority must pay the Supplier the charges within 30 days of receipt by the Authority of a valid, undisputed invoice, in cleared funds to the Supplier's account stated in the Order Form.

Details of the Authority's requirements for a valid invoice at the Start Date are set out in Annex 3.

5.5 If there is a dispute between the Parties as to the amount invoiced, the Authority shall pay the undisputed amount. The Supplier shall not suspend the provision of the Deliverables unless the Supplier is entitled to terminate the Contract for a failure to pay undisputed sums in accordance with clause 11.6. Any disputed amounts shall be resolved through the dispute resolution procedure detailed in clause 35.

5.6 If any sum of money is recoverable from or payable by the Supplier under the Contract (including any sum which the Supplier is liable to pay to the Authority in respect of any breach of the Contract), that sum may be deducted unilaterally by the Authority from any sum then due, or which may become due, to the Supplier under the Contract or under any other agreement or contract with the Authority. The Supplier shall not be entitled to assert any credit, set-off or counterclaim against the Authority in order to justify withholding payment of any such amount in whole or in part.

5.7 The Supplier must ensure that its subcontractors and supply chain are paid, in full, within 30 days of receipt of a valid, undisputed invoice. If this doesn't happen, the Authority can publish the details of the late payment or non-payment.

6. The Authority's obligations to the Supplier

6.1 If the Supplier fails to comply with the Contract as a result of an Authority Cause:

(a) the Authority cannot terminate the Contract under clause 11 on account of the failure to comply, provided this will not prejudice the Authority's right to terminate for another cause that may exist at the same time;

(b) the Supplier will be relieved from liability for the performance of its obligations under the Contract to the extent that it is prevented from performing them by the Authority Cause and will be entitled to such reasonable and proven additional expenses that arise as a direct result of the Authority Cause;

(c) the Supplier is entitled to any additional time needed to deliver the Deliverables as a direct result of the Authority's Cause;

(d) the Supplier cannot suspend the ongoing supply of Deliverables.

- (a) as to the financial stability of the Supplier such that it may impact on the continued performance of the Contract; or
- (b) as to the sustainability or health and safety conduct of the Supplier, subcontractors and supply chain in the performance of the Contract;

then the Authority may:

- (i) require that the Supplier provide to the Authority (for its approval) a plan setting out how the Supplier will ensure continued performance of the Contract (in the case of (a)) or improve its sustainability conduct or performance (in the case of (b)) and the Supplier will make changes to such plan as reasonably required by the Authority and once it is agreed then the Supplier shall act in accordance with such plan and report to the Authority on demand
- (ii) if the Supplier fails to provide a plan or fails to agree any changes which are requested by the Authority or materially fails to implement or provide updates on progress with the plan, terminate the Contract immediately for material breach (or on such date as the Authority notifies).

8.4 The Supplier must provide a list of Supplier Staff needing to access the Authority's premises and say why access is required.

10. Intellectual Property Rights (IPRs)

10.1 Each Party keeps ownership of its own Existing IPRs. The Supplier gives the Authority a non-exclusive, perpetual, royalty-free, irrevocable, transferable worldwide licence to use, change and sub-license the Supplier's Existing IPR to enable it and its sub-licensees to both:

(a) receive and use the Deliverables;

(b) use the New IPR.

10.2 Any New IPR created under the Contract is owned by the Authority. The Authority gives the Supplier a licence to use any Existing IPRs for the purpose of fulfilling its obligations under the Contract and a perpetual, royalty-free, non-exclusive licence to use any New IPRs.

10.3 Where a Party acquires ownership of intellectual property rights incorrectly under this Contract it must do everything reasonably necessary to complete a transfer assigning them in writing to the other Party on request and at its own cost.
