On the above summary of the survey the urgency of the work required is noted in terms of years, trees that did not require any work are not listed on here and can be found on the main survey sheets.

Some of the trees have been highlighted red which indicated the most urgent trees, mainly trees that are dead, pose a risk to the public or are in need of further investigation. Those that require further investigation will be given another full survey after the work is carried out.

The list is very in depth in terms of the work required so not every tree on here will need doing straight away, some can be left for a year or two and some may even not be needing the work suggested as with local knowledge of the grounds maintenance team some of the trees will be out of the way or in low traffic areas. The survey will have picked up on the risk of areas however only what is seen at the time can be noted.
