1. **The requirement seems very technically focussed, with little detail on functional requirements. What has driven this approach?**

   We have an already developed application and need to make sure that what is built next is compatible with the current setup.

2. **Is this for an existing website / app?**

   This is for an existing mobile application built in React Native. The application is in Beta and is available to download from iOS and Android app stores.

3. **Is this design/development something your existing web/app supplier could undertake?**

   Yes, but it would take a very long time to achieve. We are looking for an agency to speed up the development process and get the finished product out in the market quicker.

4. **Why have you chosen the Contracts Finder website to request tenders? Is this a requirement of the grant funded application?**

   Yes, this tender is part of the Business Investment For Growth grant application.

5. **What are the timescales associated with approval of funding? Have you already submitted a request for funding?**

   The application for funding is still in process and this tender is part of the application. The deadline for tender applications is October 2, 2020.

6. **The requirement tender seems quite technical and in-depth, which can be difficult to elaborate on as a solution. Some items we can simply either complete or not. Would simple yes/no answers for some of the tasks be sufficient for you and if not, could you please clarify your expectations for the responses?**

   Yes, it would be sufficient for some of the tasks, as long as we have confirmation and clarity that you are able to fulfil the required tasks.

7. **Does the supplier have to be based in Cornwall?**

   No, the supplier can be based anywhere in the United Kingdom.
