14th February 2020

Dear Sir/Madam,

CONTRACT FOR: Heavy Duty Offshore Boom & Reels

Please see below for the response to a question raised via email. To ensure that all applicants have access to the same information we will publish this document on Contracts Finder.

Qu : In reference to above tender and compatibility between our booms/wheels WITH existing Vikoma power packs we have following questions: Is 140 bar available by 39 l/min?

Ans : The answer is no, the Vikoma power pack will not produce 39 l/min @140 bar. The power available from the Vikoma power pack would be 16 l/min @135 bar, 39 l/min @ 80 bar or 58 l/min @56 bar using a 3/4" QRC, as stated on the data sheet. It may be possible to meet the tender requirement through different pump/hydraulic layouts, which should be fully detailed and costed if this is to form part of your proposal. Please note that part of the acceptance testing of these units for the winning tender will be to power a fully loaded boom reel in each direction using a Vikoma power pack to prove the hydraulic system is capable of the task.

Any additional questions and answers need to be submitted to contracts@mcga.gov.uk by 4pm on 17th February latest, they will then be uploaded in a separate Q&A document to Contracts Finder.

I hope this provides useful additional information to assist in bid submission.

Yours faithfully,

A handwritten signature in black ink, appearing to read "G. Norris".
