Terms & Conditions:

The G-Cloud Framework and Call-Off Contract shall take precedence.

Pricing document:

152242027022542-p
ricing-document-20

Reason for change:

The servers and infrastructure used within the Buyers environments are running platforms/components that are past their end of life and are therefore no longer supported. This is a risk to the business.

The Buyer requires that all unsupported applications are upgraded/rebuilt to a supported supplier software version.

Scope of the requirement:

The Buyer has specified the underlying Operating Systems and SQL Server versions to be targeted as part of the Technology Refresh. These are:

- Microsoft Windows Server 2019
- Microsoft SQL Server 2019 (Including Reporting Services)

Requirement:

The Buyer requires provision of an enhanced discovery and partial remediation of the Agresso solution component to mitigate risk in respect of custom ACT's identified during a previous Agresso Remediation Discovery. The further Agresso Enhanced ACT Discovery phase is to enable a 'Go-No Go' decision in relation to the upgrade due to the complex nature of the ACTs.

The initial Agresso upgrade will be carried out on a single environment, then the ACT customisations within the solution will be tested to ensure they meet success criteria.

The supplier will carry out the core upgrade of the Agresso platform on a single environment, plus required post upgrade tasks and associated testing in order to determine as soon as possible within the remediation process if these ACT's are likely to require a rewrite as a result of test failure.

These initial tasks will be:

- Technical upgrade of Agresso on the DEV environment to 7.8 this would include taking an up to date copy of Live into Dev.
- The production of test scenarios, success outcomes and if applicable test scripts by the Buyer to test the successful operation of the ACT's.
- The import of data from ISCIS via Dataload. This requires that the current custom AG16 items are replaced with the dataload and data imported.
- The import of data from ISCIS via Stored procedure. This requires that the import Stored Procedure remediation is carried out within this phase.
- Buyer execution of the existing ACT procedures, scenarios and test scripts. Supporting by the Supplier and their sub contractor.

The Supplier provides for a break-out within the remediation which gives the Buyer the option to continue the remediation or halt it, based on the successful or un-successful ACT tests, post upgrade.

Recommended remediation:

- all Windows operating systems to be upgraded to Windows Server 2019, providing a compliant and Microsoft supported operating system to September 2029.

- all instances of Microsoft SQL Server are upgraded to Microsoft SQL Server 2019. This will allow The Insolvency Service environments to be covered by mainstream support until January 2025, and extended support will be applicable up to January 2030.

Refresh Approach:

Embridge Consulting will lead the refresh for remediation of the Agresso platform. They will be supported by the Supplier's staff where required to update or modify integration points between Agresso and ISCIS as required. The Embridge approach has 4 phases:

1. **Planning** - will be used to mobilise the project and prepare for the upgrade. There are environment implications for two of the planning phase deliverables:

- Complete the upgrade audit
- Prepare the TEST environments

TEST environments will need to be prepared for the upgrade:

- Provisioning an environment that has sufficient capacity to support BAU
- Preparing the environment with the pre-requisite tasks

2. **Upgrade** – TEST databases will be upgraded once the pre-requisites have been prepared. The required report updates or enhancements outlined above will be applied to TEST once the upgrade has been completed.

- The Supplier and Embridge Consulting use a migration-based approach to application upgrade of Agresso. For each environment to be refreshed a parallel environment (consisting of relevant VM's and infrastructure configuration) is made available, with the O/S and DB level platform refresh upgrades made to it. The updated solution application (Agresso) is then deployed to these new environments and the underlying databases migrated across to the new environment. Advantages:
- Roll back. A clear roll back path is provided at each stage of the tech refresh, with original environments remaining in place.
- Configuration duplication. Exact configurations and settings in terms of infrastructure and application can be observed and duplicated between environments.

3. **Test** – 2 testing cycles will take place:

- User Acceptance Testing (UAT)
- Operational testing run by end users

The Test Strategy defines the approach to testing the overall solution, including test success criteria, definitions of types of defect, and including the process for managing UAT client defects identified. The test phases enacted as part of the Agresso refresh will include:

- Unit testing (in respect of new or replacement *customisations* required)
- User acceptance testing (UAT)

Upon completion of Integrated Systems testing and deployment the Buyer will have the opportunity as part of the update programme to carry out their own functional acceptance testing inline within their own acceptance criteria before signing off the update. This signoff would be carried out before the update is deployed to the LIVE environment.

UAT will be conducted by the Buyer. The User Acceptance Testing (also called Client Acceptance Test) phase concentrates on testing the system's capability to deal with the range of business scenarios it will be expected to handle; its purpose is for the Buyer to be satisfied that the system

has been refreshed correctly and is ready for live operation. The Supplier expects the Buyers personnel to conduct UAT in order to test the complete package of software and sign-off their acceptance of it before it is implemented in the live/production environment. UAT will be based on test scripts developed by the Buyer.

All defects identified during UAT which are not previously known defects, will be formally recorded, classified and audited to a satisfactory resolution using a tracking tool on a common shared repository, utilised jointly by the Buyer and provided by the Supplier. The Supplier and Embridge Consulting will rework the system and undertake all phases of the test process again before releasing any updated software to the Buyer for further testing. Only when the Buyer is satisfied that a defect has been resolved will it be closed in the shared database.

User Acceptance Test Entry and Exit Criteria

Entry Criteria

- Buyers UAT Test Scripts
- All components installed and configured on the UAT / SIT test environment
- All critical or high severity defects hindering commencement of UAT testing must be resolved.
- All medium and low severity defects agreed for further release mutually between the Supplier and the Buyer (Up to a maximum of 20% of all defects raised during this stage).

Exit Criteria

- UAT test scripts executed and passed
- UAT defects are logged in the Suppliers call handling repository and their status updated to prove successful retest
- All critical and high severity defects resolved and closed.
- All medium and low severity defects agreed for further release mutually between the Supplier and the Buyer (Up to a maximum of 20% of all defects raised during this stage).
- UAT test results recorded.

4. Deploy

- **Supplier and Embridge consulting environments:** The Supplier may make use of a Factory Test Environment (FAT) hosted within its infrastructure for testing purposes. All configuration of this environment would be the responsibility of the Supplier.
- **Buyer environments:** The number of servers and specification required remains as per the detail provided above in this document. The Buyer and Supplier will be responsible for the following activities on the new, refreshed environments:
- Operating system: Windows 2019: Default installation and configuration by Insolvency Service or their infrastructure partner
- Database Management System: Microsoft SQL Server 2019: Individual database configuration to be carried out by EQ after installation of SQL 2019 by Insolvency Service.

- Other Software: Unit4 ERP Release 7 update 8: Installation and configuration to be carried out by EQ and Embridge Consulting.

Change which has a larger requirement for development, implementation or testing will be subject to a deployment methodology carried out across:

Development (DEV) - Changes will be made to the customisations source code (if required) on these environments, tracked and subject to unit tests by support analyst and developer resource. Only once successful unit testing has completed, and a successful build has complied will a release be made available for deployment to further environments.

Refresh Timeframe:

The outline plan will be used as a baseline and adjusted accordingly to the agreed points raised above and an agreed start date. Based on the proposed approach, work items and test requirements the indicative timeframe covers a period of 3 weeks *. It should be noted that this is based on carrying out UAT test cycles on a single environment. The 3 weeks* period includes:

- Upgrade of the Agresso solution on a dev environment
- Testing of the Agresso solution / ACT's by the Supplier
- Project Management during the above period

This excludes:

- Time to have the Supplier and Embridge Consulting staff security cleared.
- Build and provision of environment
- Build and provision of test scripts and definition of success criteria.
