

### **708935453 - Commanders Thermal Optic (CTO) Project**

The Authority intends to place a multi-product, multi-supplier Framework Agreement contract for handheld thermal optics (Long Wave Infra-Red) for £1 consideration. The possible total contract value is anticipated to be up to £8M ex-VAT (SUBJECT TO CONTRACT) across multiple suppliers.

The purpose of this framework is to enable the Authority to flexibly procure the CTO capability for Front Line Commands (FLCs) over the next 7 years dependent on user requirements and funding.

This project will initially pre-qualify potential suppliers through the DPQQ process then an ITT will be issued to enable compliant suppliers to be brought onto the framework contract. There is currently no funding to procure equipment and any future procurement against this framework will be subject to funding availability and requirements set by FLC on a requirement to requirement basis.
