Schedule 1: Services

We Supplier shall provide the following services in line with but not limited to requirements issued within the enquiry to shortlisted G Cloud 12 suppliers:

Title: GHWT Technical Architecture And Implementation Services

Service Team: Get Help With Technology Programme

Requirement Owner: Graham Archer

Background- update

The Get Help with Tech (GHWT) programme was established at pace as part of the Departments response to Covid-19 and its' impact on learning for disadvantaged pupils. It required the mobilisation of digital solutions that enable service users such as schools and social services, to access the services and provisions. The programme is now a flagship DfE scheme for mitigating against disruption to face to face education to improve remote education provision for disadvantaged pupils through technology.

The programme supports:

- Access to children's social care services and educational services via devices and connectivity
- Remote education via digital education platforms

With the aims and objectives to:

- Ensure disadvantaged young people can access and engage with education resources remotely
- Prevent the widening of the attainment gap between advantaged and disadvantaged children
- Children with social workers can maintain communication with services by video contact
- Care-leavers can access personal advisers and mental health services
- Shaping the further of digital education and remote learning

Since its launch in Spring 2020, the programme has delivered 1.3 million devices to schools and responsible bodies, supported over 100,000 families to get internet access; and supported over 7,500 schools to get set up on a digital platform.

Because schools had differing levels of digital maturity, the Department enabled Social Care providers and schools to order devices with a pre-installed, but temporary, 'DfE build'. This service provides the InTune operating system for those Windows devices distributed through the programme (around half of all Windows devices distributed by the programme) and the Cisco Umbrella security and parental/Departmental controls for Windows and Chromebook devices (about two thirds of distributed devices).

To support the 'DfE build', the GHWT Programme awarded a contract for technical consultancy and implementation services for the provision of cloud based technical architecture and cyber security and control solutions. These licences are managed via a state-of-the-art, cloud based, Mobile Device Management (MDM) platform. When a DfE-build or Cisco licenced device is activated and accesses the internet it automatically links to the MDM platform and uses the cloud-based operating system, rather than an operating system stored on the device itself. This also

enables the Department to understand whether the devices are being used following distribution. In the event of an incident, such as theft of a device, the platform can also be used to shut down the device remotely.

However, the intention has always been that the 'DfE build' should be a temporary solution and User Research has reported that many schools and young people have found it overly restrictive because it has necessarily adopted a one-size-fits-all approach to building devices. As a result, many web resources commonly used by schools, such as YouTube, cannot be accessed from 'DfE build' devices. The next stage for the programme is, therefore, to support schools to take ownership of these devices; removing the 'DfE build' from them and installing their own build in its place. The ongoing requirement for technical services and advice in relation to device configuration and connectivity services will support this work for those schools who received built devices in previous waves. Ministers are currently considering whether the Department should offer a 'DfE build' for Wave 8 devices (to be procured over the summer). If Ministers decide to continue to offer a build then this contract will also be required to support maintaining and evolving the build for those, new, devices.

The MDM platform also supports a virtualised test bench for the devices, to test and iterate build scripts and configuration without impacting either the live devices in the hands of children or requiring changes to the configuration on the physical devices by engineers. The test bench has enabled the teams to safely test ideas and updated configurations five times faster than rebuilding physical machines with none of the risks of adversely impacting devices posed by a physical test bench.

The Programme has iterated on the cloud-based device management (Microsoft Intune) configuration and safeguarding configuration, with decisions governed through the policy teams and the DfE Enterprise Architect decisions.

This approach has been signed off by the Enterprise Architect who holds delegated authority on behalf of the DfE CTO and changes to the configurations over time have been signed off by the GHWT Board.

The Department's current contract is due to finish on 7 August 2021 and this scheduled reprocurement process is required to attain the required services via the market. Failure to do so would present a significant risk to the programme, and a risk to schools, children and young people still using devices with the 'DfE build' installed, as the continued security of the build could not be guaranteed.

Requirement

We are seeking to engage a service which will work remotely to ensure the stability and delivery of the technical cloud-based configuration, build, management and problem-solving at 3rd line; The service will support technical decisions and implementation for future services design. We are seeking this support across the "end-to-end journey" to achieve the policy outcomes. We expect this to include but not be limited to:

- Support implementation of the preferred off-boarding options for supporting schools to adopt 'DfE build' restricted Windows laptops and tablets, such as well as options for sign-posting activities to encourage users to return devices back to schools and to begin the off-boarding process. Support and develop technical options to be production ready.
- Troubleshooting and problem solving for live issues relating to the Windows fleet mentioned above, including supplier engagement related to these issues.
- Specialist 3rd line support where required, provided both via a cloud-based interface (Zendesk) and other communication channels as appropriate.

- Ensure the stability and delivery of the technical configuration, build, management and problem-solving at 3rd line as required.
- Iteration and operation of a resilient test bench and regime for devices procured and distributed under the scheme, including provisioning packs, virtual test bench, bloatware removal and device suitability assessment.
- Documentation of implementation decisions, provisioning packs, PowerShell scripts, remote management tools, configuration of MDM and Safeguarding tools, using a cloud-based repository as appropriate to ensure future accessibility by the Department and other contractors.
- Support development of a coherent connectivity offer to support the programme to provide deep fixed line and mobile connectivity technical advice and expertise.
- To support and guide a coherent connectivity offer. This would include advice on connectivity supplier management and connectivity device configuration.
- Documenting technical requirements for Get Help With Tech device provision, including maturing version control and technical governance processes, using a cloud based repository as appropriate to ensure future accessibility by the Department and other contractors.
- Support the development of a consolidated cloud hosted technical knowledge base of the above
- Support knowledge transfer in relation to the MDM operation licencing agreements and supporting the development of a consolidated technical knowledge base of the above
- Providing specialist commercial advice and leading specialist commercial work on IT hardware and software procurement necessary for a cloud based remote infrastructure.
