---	------------	----------------	-------------------	--------	----------------	-------

OpenROAD Runtime Client: Includes during the term: software license rights and Gold Support Services. OpenROAD Client is defined as an individual (i.e., a named-user) authorized by you to use the programs that are installed on a single server or multiple servers, regardless of whether the individual is actively using the programs at any given time. A non-human operated device (such as a single computing system, including virtual or otherwise emulated) will also be deemed an OpenROAD Client in addition to all individuals authorized to use the programs, if such devices can access the programs. For the avoidance of doubt, if multiplexing hardware or software (e.g., a web server product or any product that pools connections, reroutes information and reduces the number of devices) is used, the total number of individuals and devices that are authorized to access the programs will also be counted as OpenROAD Clients.
