Document processing

Processing documents involves the extraction of the document text and metadata from electronic files for searching as well as separating out email attachments from their parent emails so each document can be uniquely numbered and reviewed discretely. Additionally, filtering of nonreviewable or system files can be performed to reduce the volume of irrelevant documents for review.

Document deduplication

Duplicate documents can be identified using their MD5Hash values to reduce the overall volume of documents for review and to ensure that review teams are not looking at repetitive information.

Application of search terms and filtering criteria

Keyword searches and other criteria, such as date ranges, are applied to target the most relevant documents which are then prepared for loading to the Relativity software for further review.

Online document hosting

The document hosting platform, Relativity, acts as both a pre-disclosure preparation workspace as well as a powerful research tool allowing users to search for documents relating to key witnesses and issues which form the themes of investigations and inquiries. Search results and individual documents can be coded and accessed quickly via fast links and data can be visualised using a range of graphical reporting and display tools.

Analytics

Services include:

- Advanced searching and analysis
- Email threading
- Near duplicate analysis
- Data visualisation
- Technology Assisted Review

Redaction

Electronic document redaction options include plain black or white boxes, a cross (designed for full page redactions) or custom text full page redactions can be made across multiple pages at a single instruction if large page ranges need to be protected.
