Annex 3 Specification and Contractor's Methodology

Produce Regional Invasive Alien Species Management Plans (Action A.5) to support the RAPID LIFE project: Holistic Management of IAS Species in Freshwater Aquatic, Riparian and Coastal Ecosystems.

North Region. (see map).

Specification

The Authority is the UK Government Department responsible for the environment, food and farming and rural affairs. The Authority's priorities are to secure a healthy natural environment; a sustainable, low-carbon economy; a thriving farming sector and a sustainable, healthy and secure food supply. Further information on the Authority can be found at: [APHA](#)

RAPID LIFE – holistic management of Invasive Alien Species (IAS) in freshwater aquatic, riparian and coastal ecosystems (LIFE16 NAT/UK/000582).

Action A5 – Produce regional IAS management plans

1. Background

RAPID (Reducing And Preventing IAS Dispersal) LIFE is a three year project led by the Animal and Plant Health Agency (APHA), with Natural England and Bristol Zoo as key partners, that will pilot an innovative approach to Invasive Alien Species (IAS) management in freshwater aquatic, riparian and coastal environments across England.

Globally Invasive IAS are considered to be one of the most significant causes of biodiversity loss, second only to habitat destruction. RAPID LIFE will deliver a package of measures to reduce the impact and spread of IAS in freshwater aquatic, riparian and coastal environments across England. It will help to conserve species protected under the Birds and Habitats Directives whilst assisting in compliance with the EU Regulation on IAS, Marine Strategy Framework Directive and the Water Framework Directive. The status of Natura 2000 sites will also be enhanced and protected.

RAPID LIFE will work in freshwater aquatic, riparian and coastal environments across England. To facilitate this approach England will be divided into five study regions (see map at end of document):

- North
- Midland
- East of England
- South East
- South West

RAPID LIFE seeks to bridge the gap between high level strategies (such as GB IAS

strategy) and action on the ground at a local level. To be achieved by contracting experts with local knowledge of each region, the project hopes to engage local communities in strategic and effective IAS management and help them coordinate and collaborate with neighbouring regions, facilitating a bottom up approach.

The subject of this contract is to support delivery of Action A5 of the RAPID LIFE project - *Produce Regional IAS Management Plan. For the North Study Region.*

Separate contracts, all with the same requirements as this one, will also be issued for each of the other four study regions, namely:

**East of England,
Midland,
South East, and
South West**

IAS are often managed independently at a discrete local-level to local priorities and in some situations management could greatly benefit by working in a more coordinated manner, with greater understanding of the need to work at the appropriate spatial scale and stage of an IAS invasion. The importance of preventative measures and the value of early interventions to stop establishment of novel IAS are sometimes overlooked. Stakeholders often only take action against an IAS once they see it causing a problem, and only on the piece of land that they manage rather than collaborating across a wider area. If local IAS managers were to work in a coordinated fashion with a clear understanding of priorities across their wider region, their efforts and resources would be utilised far more effectively and result in a greater impact.

This action will produce the first Regional IAS Management Plans (RIMPs) in England. It provides an opportunity for regional stakeholders to work with expert/s with local knowledge to identify the key actions to reduce the impact and spread of IAS in their region. This bridges the gap between high-level strategies (such as the GB IAS Strategy, see

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/455526/gb-non-native-species-strategy-pb14324.pdf) and action on the ground at a local level. RIMPs will consider both the prevention of new IAS and effective management of established IAS. In concert with other RAPID LIFE actions, RIMPs will deliver full spectrum management of IAS (prevention; early warning and rapid response; long term management).

This action will also facilitate the identification of high-risk sites for the introduction of IAS through the RIMP planning process. This will allow biosecurity actions to be more targeted whilst embedding a more strategic approach to the management of well-established IAS.

A web-based platform will be produced to support stakeholders in delivering the RIMPs (outside of this current contract).

Although the RIMPs will focus on RAPID LIFE's target environments the methodology developed and piloted can easily be adapted for use in other environments and geographical areas.

2. Contract requirement

Animal & Plant Health Agency (APHA) has developed a draft template and guidance (see Annex A, supplied with tender invite documents) which outlines how the RIMPs should be produced. The template includes section headings with accompanying guidelines providing details of the information that should be included in each section and how it

should be gathered, collated, analysed and presented. Writing the RIMP must be inclusive and involve a range of local, regional and national stakeholders. The guidelines will set out how the stakeholder engagement process should be carried out in each region.

The specific requirement of this invitation to tender is for expert/s with local knowledge of North study regions to put together the RIMP for North, using the draft template and guidelines provided by APHA

APHA will manage this contract and co-ordinate it with the contracts for the other four study regions to ensure that a consistent approach is adopted by the different contractors across all five regions. As part of the contract, each expert will:

- Gather the necessary information to complete the RIMP template.
- Use local knowledge and experience to analyse and add context to this information, in accordance with the RIMP guidelines.
- Produce a draft version of the RIMP, to be shared with APHA and stakeholders within the region.
- Run at least 2 stakeholder engagement events in each region to review the draft RIMP (one for freshwater aquatic and riparian audiences and one for coastal audiences). Reasonable adjustments, or other alternative approaches for widely engaging key stakeholders and collating feedback may be used if necessary, as considered most suited for each region
- Amend the draft RIMP in light of suggestions from APHA and local stakeholders.
- Finalise RIMP and return it to APHA.

The stakeholder engagement events will follow the format presented in the RIMP guidance, although the regional expert will be given scope to tailor the event so it is of interest to the maximum number of stakeholders in the region. The guidance will include a number of other criteria including a minimum number of attendees and a list of stakeholder groups that must be represented. Some informal stakeholder consultation may be held in advance of these events, to assist in collating the necessary information to produce the draft RIMP.

3. Outputs and contract management

The contract will extend for the period 12th April 2018 – 12th September 2018.

The experts will submit monthly progress reports to APHA over the contract period to allow APHA to monitor progress and identify any issues.

The final version of the RIMPs will be prepared and circulated by 12th September 2018.

4. Contractor experience and technical expertise

4.1 Technical expertise

The successful contractor will have:

- In-depth knowledge of IAS issues in a local/regional context
- In depth working knowledge of IAS of particular concern and IAS hotspots in the region
- In depth knowledge of IAS ecology and management in freshwater, riparian and coastal ecosystems
- Knowledge of specific regional IAS issues in order to understand how the remit of the RIMP will be implemented at a local/regional scale

- Excellent writing skills and ability to produce high quality reports and presenting results to external audiences
- High standards of data collection, management, analysis and interpretation
- Excellent interpersonal skills, team working and networking with relevant local/regional stakeholders

4.2 Contractor experience and attributes at a local/regional level

The successful contractor will have:

- Knowledge of current invasive IAS issues, management, relevant stakeholders and networks specific to the local area or region
- Existing, demonstrable links with a variety of key local/regional stakeholders and other local/regional experts which will facilitate the successful development and subsequent uptake of a RIMP
- Track record of managing local/regional, small scale IAS management projects
- Experience of coordinating and collaborating with a wide spectrum of locally/regionally relevant stakeholders
- Experience working with community level projects.

TENDER – Regional Invasive Alien Species Management Plan – North Study Region

Methodology

The Northern Regional Invasive Alien Species Management Plan (RIMP) will provide an opportunity for stakeholders to work with locally-based experts to identify the key actions to reduce the impact and spread of Invasive Alien Species (IAS) in the region. It will bridge a gap between high-level strategies such as the GB Invasive Non-Native Species Strategy and action on the ground at a local level. It will follow the framework proposed and contain all required information in the RIMP Guidance and Template document provided. It will have an adaptive lifespan and implementation will rely on the formation of strong local and regional partnerships founded on solid legal and policy principles by interested parties.

Approach

The RIMP will be produced through the Cumbria Freshwater Invasive Non-Native Species (CFINNS) Initiative and will utilise the existing strong network of strategic catchment and county-wide IAS projects representing areas throughout the Northern region. This expert network will be core to quality control and development of the RIMP. Partner organisations will include but not be limited to:

- The CFINNS Initiative and South Cumbria Rivers Trust
- The Yorkshire Invasive Species Forum (YISF) and Yorkshire Wildlife Trust
- The Yorkshire Dales Biosecurity and INNS Working Group (YDBIWG) and University of Leeds
- The Bollin Environmental Action and Conservation Group (BEACON)
- Dee Invasive Non-Native Species (DINNS)
- Tees Rivers Trust Invasive Non-Native Species project (TRT)
- North-West Wildlife Trust's Irish Sea Marine Advocacy Programme (NWWT)
- Capturing our Coast project (COC/UOH)

In-kind contributions

This RIMP will be the first time that these innovative projects across the North of England collaborate to achieve a united approach to strategic IAS management.

There is currently a strong focus on freshwater aquatic and riparian IAS in the North so we will look to expand the project into the marine environment through the involvement of the North Western Inshore Fisheries and Conservation Authority (NWIFCA), the Northern Wildlife Trusts and Sue Hull at University of Hull, as well as building new links with other coastal stakeholders. The University of Leeds may also be able to supply links to coastal and marine organisations through a joint PhD studentship with CEFAS, part of which focuses on marine and coastal pathways in relation to IAS and biosecurity.

In addition to the wealth of expertise this approach brings to the RIMP process, this model of partnership working allows the CFINNS Initiative to bring a substantial element of added value to this project through 'in-kind' contributions of partner organisations (see table below). At the point of tendering, firm offers of at least 16 days 'in-kind' contribution (worth circa £6,000) have been provided with potential for further offers as the RIMP process progresses.

Project Partner “in-kind” Contributions

‘In-kind’ contributions	CFINNS	YISF	YDBIWG	BEACON	DINNS	NWWT	Coc/UoH	TRT
Provision of information on local Stakeholders								
Provision of information on existing and planned IAS management programmes in their area								
Collection and collation of data held by existing stakeholders								
Assistance with identification and engagement of new stakeholders locally								
Facilitation of or hosting Stakeholder workshops								
Consultation & review of RIMP								
Technical input, review & QA of RIMP								
Project management with APHA								

Building partnerships and collaborations

The Northern RIMP will reflect the current work, aspirations and strategic priorities of stakeholders throughout the region. To ensure this the contract manager, working closely with member organisations, will coordinate the collation and analysis of existing information. The formation of partnerships is imperative if this plan is to succeed and the project will prioritise this action from an early stage. They will identify and record all projects in the region currently working on IAS and their associated network of stakeholders to enable the formation of a coordinated involvement and understanding.

The contract manager will work in partnership with the identified stakeholders to develop the first draft of the RIMP, taking it to wider audience during consultation workshops. The final Plan will be produced on the understanding that it is a ‘living document’, liable to change as work begins and the status of IAS in the Northern region changes.

Methodology

Led by the contract manager, the first step will be to compile an extensive list of stakeholders known to be working on or concerned with IAS in the Northern region. An appropriate representative will be chosen from each organisation to act as a point of contact. Once compiled, all contacts will be assisted in providing all relevant information that will aid the development of this plan, through a mixture of questionnaires and requests for documents. This includes, but is not limited to, examples of best practise, case studies, information on management practises including notes on effectiveness, common pathways, current survey (including data processing, storage and dissemination) and control programmes, and IAS priorities. Throughout the development of the Plan, pathways of new and existing of IAS into the region will be identified, the process of which is likely to identify further stakeholders.

Gap analysis

Once data has been collected, analyses will be carried out to determine gaps, and to establish next steps for data collection. The contract manager will lead a concerted effort to pinpoint data gaps, and this gap analysis will guide

requests for future collection of data. Led by the contract manager, the member organisations will determine if there are any gaps in information or any areas lacking detail. This will guide any further data collection that may be required.

Plan development

Information on IAS priorities and control programmes will be used to develop high-level strategies for the whole region. These will be developed with consideration of national priorities and strategies. It is not known yet whether these will be divided into sub-regions, this will be determined upon examination of results, but this is likely due to the large geographic area the North region represents. The aim of these will be to provide direction, give guidance and identify opportunities for collaboration to all existing and new IAS stakeholders in the North region.

Information will be presented using the provided guidance and template to guarantee conformity across RIMPs. It is likely additional sections will be included to reflect the needs of stakeholders as identified during consultation. The plan will also include examples of best practise and case studies which aid stakeholder's IAS management programmes. All results, strategic direction, guidance and examples will be presented in a logical, user-friendly format, that is readily understood and delivered by a wide range of users.

Workshops

At least two workshops will be held to further engage both freshwater riparian and coastal/marine stakeholders in the Northern region so that the RIMP appropriately reflects their work, opportunities and visions. One workshop will be held in Cumbria, the other in Yorkshire and will be hosted by member organisations. Consultation will be a vital part of the process to ensure that the RIMP has set aims to meet the needs of stakeholders. They will focus on the three key elements incorporated in the RIMP of Building partnerships and collaboration; Education and awareness-raising; Control and management. Workshops will also provide an opportunity to gain feedback on first drafts, drive forward future work, and generally build existing knowledge and understanding.

Education and awareness-raising

The contract manager will identify regional and local pathways, stakeholders and priorities for action. There will be a strong emphasis on prevention as the least environmentally damaging intervention and most cost-effective means of IAS management. They will also identify high use access points with possibilities of installing biosecurity awareness materials and cleaning stations.

The RIMP will provide information and guidance on:

- Priority target audiences (public, industry and landowners)
- Priority protected areas (high-use access points and sites at threat because of their environmental attributes and parameters) to target education and awareness-raising.
- Existing education and awareness raising materials and target audiences.
- List those involved in practical IAS surveillance, monitoring and management.
- Target audiences currently being missed and cite those that are a priority (e.g. those identified through pathways)
- Evaluation of the awareness, uptake and compliance with biosecurity and risk assessments by recreational water users and the effectiveness of biosecurity training

The above information will be used to produce and implement a regional communications plan - targeting materials to the key pathways and audiences, promoting better access to clear information about IAS and biosecurity.

Control and management

The contract manager will consult with member organisations to identify the current IAS threats, distribution and control programmes within the region. They will also identify those considered to be potential threats using the List of Alien Invasive Species of Union Concern, UKTAG High Impact Species, and consulting with neighbouring regional RIMP Contract managers and the Non Native Species Secretariat.

The RIMP will provide information and guidance on:

- IAS present or potential threats and their associated response levels. These will be categorised into lists as specified in the RIMP 'Guidance and Template' document, by looking at biology, likelihood of entry, establishment, spread and impacts (both environmental and economic).
- High-risk locations and priority landscapes in the region
- List those involved in IAS surveillance and reporting and current methods used
- Identify requirements for additional detection, surveillance and rapid regional response framework mechanisms to new incidences of priority IAS.
- Identify effective methodology and case studies available for eradication of localised outbreaks of black and red-listed AIS for the formation of Alert Species Response Plans, as described in the RIMP 'Guidance and Template' document.

Long term management

The contract manager will work with member organisations to ensure that the RIMP sufficiently demonstrates and considers the impacts of IAS in the North region. The RIMP will take into consideration the status of IAS, priorities and management programmes to provide strategic direction which supports the long-term management aspirations of stakeholders. Furthermore, the RIMP will be a living document, which can be updated as work begins and the status of IAS in the Northern region changes.

The RIMP will provide information and guidance on:

- IAS that are regionally widespread where control measures are applied and where total eradication is not feasible.
- Existing prioritised and coordinated control of IAS and habitat restoration programmes in the region
- Management approaches geared to containing, reducing the impact of and preventing the spread of specified IAS.
- Best practice and case studies of strategic work programmes
- Identify methods of monitoring of IAS where no adequate control mechanisms are currently in place.
- Identify stakeholders and sites that are involved in supporting national bio-control programmes

Risk Management

The contract manager will keep the South Cumbria Rivers Trust team aware of the project deliverables, due dates and methods. In the event that the contract manager becomes indisposed, another member of the team will step into this role for the required period without impacting upon project delivery.
