It is our responsibility to see that England's rich natural environment can adapt and survive intact for future generations to enjoy.

(ii) Background to the specific Natural England work area relevant to this purchase

(A) The NCEA (Natural Capital & Ecosystem Assessment) Programme

UK Government has set world-leading ambition on protecting our natural assets, internationally through the Convention of Biodiversity and domestically via the ground-breaking 25 Year Environment Plan. Intrinsically linked to the successful delivery of Net Zero, protecting our environmental services has never been more vital. Achieving these goals is underpinned by the provision of systematic and robust evidence. For the first-time, Defra are developing a programme to deliver up-to-date, UK-wide environmental data to allow for agile policy making grounded in the best available evidence – to truly understand where we are and where we need to get to.

NCEA is a transformative programme to understand the extent, condition and change over time of environmental assets across England's land and water environments, supporting the government's ambition to improve the environment within a generation.

(B) The Living England Project

Natural England leads on both the development of the Living England model (NCEA Project 1.1) and 25 YEP indicator D1 on habitat quantity, quality, and connectivity (which it is proposed will be the basis for the Environment Bill wider habitats target). The use of remote sensing satellite data to measure and monitor the location and change in habitats is a developing area of work. Developing its capacity to detect change is critical for assessing ecosystem extent over time and change in natural capital ecosystem assets.

Living England produces a map of broad habitat classifications for the whole of England based on up-to date satellite imagery and a collection of ancillary data layers including elevation (and derivatives such as slope, height above nearest drainage), proximity to various

features (e.g., woodland, moorland, surface water, roads) and climatic variables. This is carried out by first splitting up England into 14 Biogeographic Zones, based on National Character Areas, which are distinctive areas each with unique environmental conditions. Recent satellite imagery is then identified for each biogeographic zone, which aims to use as cloud-free imagery as possible to create spring and autumn mosaics. A segmentation process is then applied to identify parcels of land with similar appearances in the imagery – forming a series of polygons using an object-based image analysis framework (OBIA). The polygons are then classified using a random forest, machine learning algorithm to identify the likely broad habitat present, informed by the field collected habitat records, satellite imagery and the ancillary datasets. The resulting map is a habitat probability map showing the likely broad habitat class for each polygon, creating a national picture of our natural capital assets. Living England Phase IV was published under an Open Government Licence in 2022 and can be accessed here [Living England Habitat Map \(Phase 4\) | Natural England Open Data Geoportal \(arcgis.com\)](https://www.naturalengland.org.uk/data-and-information/open-data/england-habitat-map-phase-4).

Living England requires regular provision of field survey data from across the different habitat classes and biogeographic zones (BGZs) in order to ensure high levels of accuracy and reliability in the resulting national habitat map (Figure 1).

Figure 1: Living England Biogeographic Zones (BGZs) based on National Character Areas.

(iii) Requirement

(A) Living England Field Surveys – BGZ02

This specification covers habitat surveys to be undertaken in 2023 across various habitats in biogeographic zone (BGZ) 02 covering Northumbria. This contract aims to collect a total of 700 data points aligned with the Living England segmentation, through the use of Living England's Field Maps app. The target habitat types cover the majority of habitats classified within Living England.

- Total number of data points collected in year 2023 – 700

All data collected as part of these habitat surveys will belong to Natural England, and may be used for current and future projects where habitat data are required.

Survey points should be collected in relation to the detailed habitats listed in Table 1.

Table 1: Living England (UKBAP) Classification Framework

Detailed Habitat	UKBAP Level	Broad Habitat
Acid, Calcareous, Neutral Grassland	Semi-natural Grasslands	Grassland
Arable and Horticultural	Broad	Cropland
Bare Ground	EO Resolution	Bare Ground
Bare Sand	EO Resolution	Bare Ground
Bog	Broad	Wetland
Bracken	EO Resolution	Grassland
Broadleaved, Mixed and Yew Woodland	Broad	Woodland
Built-up Areas and Gardens	Broad	Urban
Coastal Saltmarsh	Priority	Coastal
Coastal Sand Dunes	Priority	Coastal
Coniferous Woodland	Broad	Woodland
Dwarf Shrub Heath	Broad	Heath
Fen, Marsh and Swamp	Broad	Wetland
Improved Grassland	Broad	Grassland
Scrub	EO Resolution	Woodland
Water	EO Resolution	Freshwater

The contractor should work alongside the Natural England Living England team to confirm areas to target the survey areas. This will involve areas across biogeographic zone 02 for England and the following habitat classes, with those in **bold** of particular priority:

- Acid, Calcareous and Neutral Grasslands
- Arable and Horticultural
- (B) • Bare Ground • Bare Sand • Bog • Bracken
- Broadleaved, Mixed and Yew Woodland
- Built-up Areas and Gardens
- Coastal Saltmarsh
- **Coastal Sand Dunes**
- Coniferous Woodland
- (C) • Dwarf Shrub Heath - particularly Montane Heath • Fen, Marsh Swamp
- Improved Grassland • Scrub

After consultation with the NE Living England team on targeted habitats, the supplier is expected to produce a proposal of the sites they will survey. This will be subject to approval from the Living England Project Leaders.

The contractor will be responsible for ensuring all permissions for land access are in place using the Living England provided standard letter as a template, prior to undertaking the surveys. The contractor will need to get permission from the landowner/occupier to carry out standalone LE surveys, even if it is on publicly accessible land. The contractor does **NOT** need to get permissions to carry out standalone LE surveys on NE-owned NNRs.

Land Registry and Rural Payments Agency data for the survey sample has been acquired by Natural England and will be made available to the contractor at the start of the contract. The data will be in Excel (.csv) format.

A data license will be required between the contractor and Natural England before this data can be released. Contractors will be expected to abide by the contract terms and conditions in relation to all data handling.

Natural England cannot guarantee the accuracy of owner details from either Land Registry or Rural Payments Agency data. The data supplied may not include email addresses, phone numbers, or other contact details which the contractor will be expected to obtain during the process of negotiating access permissions.

The contractor is expected to Provide Natural England with a site-specific risk assessment, including requirements around coronavirus, before the survey - **YOU MUST SEND THIS TO THE LIVING ENGLAND ENQUIRIES MAILBOX PRIOR TO THE SURVEYS**

REDACTED Under FOIA Section: 40, Personal Information contract will provide assurance that:

- They will work within government guidance on working outdoors:
<https://www.gov.uk/guidance/working-safely-during-coronavirus-covid-19/construction-and-other-outdoor-work>
- Coronavirus specific risk assessments have been carried out by the contractor.
- Landowners/occupiers of sites concerned are aware of the survey and agree to surveyors being on each site involved – surveys will not proceed without landowner/occupier agreement.
- Interaction with NE staff is not required unless assessed as essential to the survey work, and this is specifically covered by a risk assessment and wellbeing conversation for the involvement of NE staff (for National Nature Reserves (NNRs), this is set out in the NNR decision framework). Likely mobile reception should be considered when conducting risk assessments. Mobile service cannot be guaranteed; therefore, the contractor should consider alternative arrangements.

The contractor is expected to undertake field data collection on the agreed targeted sites using the Living England Field Maps app. This should follow the methodology set out in the Living England Specification for Training Data Collection document (LE Specification for Ground Data Collection – NCEA (external).pdf) and the Quick Start Guide to Living England Training Data Collection (Quick Start Guide to Living England Training Data Collection (external).pdf) documents which will be provided.

Field surveyors should add data points within the segments corresponding to their location and complete the information required on the ESRI Field Maps app, including details of

habitat cover and priority habitat species. Where possible, the surveyor should add as much detail as the app permits, including recording to the finest resolution of habitat class possible, provided they have suitable ecological knowledge to do so.

All data collected will automatically be uploaded and tracked on the Living England dashboard, detailing where and when data points have been collected enabling continual assessment of the range of habitat data points.

The habitat surveys may require annual repeat surveys to collect additional training data points to keep the model up to date and make improvements. The field maps app may be updated in the future, with prior warning and training to be given if required.

Data and analysis from Living England Field Surveys may support the Change Detection Field Surveys and deliverables. Any relevant data or information is to be provided to the Change Detection Field Survey supplier at the request of the Authority.

The habitat surveys must be completed by the end of the contract completion date. Contractors must bid for the full contract.

The contractor is expected to project manage the selection of suitable survey sites, delivery of the access permissions, pre-survey risk assessments, and field surveys, ensuring project milestones and timescales are achieved.

The contractor should ensure regular communication with the Natural England Living England team to update on progress and any issues which may arise. The Living England team will be able to track data points collected through the Living England dashboard and will update on any changes to habitat types and/or areas with which to target where appropriate.

The contractor will provide a short, interim report about the habitat surveys (side of A4) noting any issues that were encountered during the surveys, e.g., alignment with segments, identifying areas of change and causes, use of the app for data collection and any advice to help smooth the process next time. Any reasons why data points could not be collected should also be included in the report.

Provide a report at the end of the project to capture how the objectives and deliverables have been met and any lessons learnt throughout the project and feedback to the team, to help inform future contract management running.

Natural England will provide contractors with the following data to support the delivery of this work:

- Land Registry and Rural Payments Agency data
- Living England Phase IV map from 2021 ([Living England Habitat Map \(Phase 4\) | Natural England Open Data Geoportal \(arcgis.com\)](#))
- [Living England Technical User Guide \(Living England: Satellite-based habitat classification- Technical User Guide - NERR108 \(naturalengland.org.uk\)\)](#)
- Living England Esri Field Maps application
- Living England Dashboard for monitoring collected points

Any reasons why data points could not be collected should also be included in the report. - Ground truth field survey data points uploaded to the AGOL dashboard.
Why is this of benefit to Living England? Justification of why to do it	This analysis will provide training data for Living England in addition to a reliable dataset for validation purposes. The ground truth data will be split 80% for training the random forest model which requires accurate, up to date data, and 20% for validation. This will directly lead to improvements in the Living England habitat probability map and ensure it is up to date and of high quality.
