Call-Off Deliverables

Organisation the work is for	UK Research and Innovation
Why the work is being done	Innovate UK is progressing on its journey to becoming a data-driven organisation. We have recognised the need to improve our Data Analytics Platform to enable us to progress our strategic objectives. Specifically we wish to design and deploy a consolidated data analytics platform which will hold both internal and external data and enable us to leverage both in our analytics and reporting outputs.
Problem to be solved	This is a new platform intended to enable interactive data mining and to enable AI and ML data functions to be applied against it in real time. To achieve this we need the platform constructed and deployed. This will require a number of current data sources and integration tools to be interfaced with this new platform to ensure it retains current and accurate data from the internal systems sources. Also external data feeds from a variety of providers will be integrated using our existing SIL (message bus) capabilities.
Who the users are and what they need to do	This is a technical delivery platform with a wide array of users and requirements. These are stated in a separate presentation. The analytics platform will be hosted in AWS in line with our strategy and other InnovateUK internal systems and is likely to be based on RDS PostgreSQL. The platform is intended to be flexibly scalable, resilient and highly performant as it will serve interactive Power-BI reporting systems across the organisation. Additional capabilities to utilise other analytics tools and systems in future is in scope of this project as well as integration of current deployed BI reports currently hosted on other and legacy platforms.

	In addition we require an AWS data lake to be provisioned with supporting EC2 nodes to run python ETL processes against that datalake. Further expansion to include apache spark and apache kafka are considered likely in subsequent phases (not in scope for initial platform delivery) however note should be made of this and provision in design made accordingly.
Early market engagement	N/A
Any work that's already been done	Discovery has already been done – this is an alpha phase project. A full presentation on the requirement, strategy, architecture and desired outcome is available separately.
Existing team	This project will require close working with the Innovate UK data team, helping to develop capability within the Innovate UK team, as well as delivering the core deliverables of the tender. The main objective of this project is to design, build and deploy a fully operational data platform suitable for intensive query use from a large number of Power-BI dashboard users across the organisation. Additional data loads and automated analytics processes are required to interact with this data based on Python, and a variety of other AWS analytics tools including but not limited to SageMaker.
Current phase	Alpha
Address where the work will take place	Hybrid working will be used. The activity is expected to be performed using hybrid working – mostly remote with some in-office time at our Swindon offices for meetings and design discussion workshops for example. Head Office address: Polaris House, North Star Avenue, Swindon, Wiltshire, SN2 1FL. Polaris House
Working arrangements	This project will require close working with the Innovate UK data team, helping to develop capability within the Innovate UK team, as well as delivering the core deliverables of the tender.
Security clearance	BPSS required
Latest start date	Friday 20 th May 2022
Expected contract length	3 - 4 months Resource Effort

Additional terms and conditions	No additional conditions
Summary of the work	We have recognised the need to improve our Data Analytics Platform to enable us to progress our strategic objectives. We wish to design and deploy a consolidated data analytics platform which will hold both internal and external data and enable us to leverage both in our analytics and reporting outputs.

 - 1.1.2 the Call-Off Contract Effective Date in respect of the Additional Insurances.
- 1.2 The Insurances shall be:

 - 1.2.4 maintained for the Contract Period and for at least six (6) years after the End Date.
- 1.3 The Supplier shall ensure that the public and products liability policy contain an indemnity to principals clause under which the Relevant Authority shall be indemnified in respect of claims made against the Relevant Authority in respect of death or bodily injury or third party property damage arising out of or in connection with the Deliverables and for which the Supplier is legally liable.

2 How to manage the insurance

- 2.1 Without limiting the other provisions of this Contract, the Supplier shall:
 - 2.1.1 take or procure the taking of all reasonable risk management and risk control measures in relation to Deliverables as it would be reasonable to expect of a prudent contractor acting in accordance with Good Industry Practice, including the investigation and reports of relevant claims to insurers;

- 3.2 Where the Supplier has failed to purchase or maintain any of the Insurances in full force and effect, the Relevant Authority may elect (but shall not be obliged) following written notice to the Supplier to purchase the relevant Insurances and recover the reasonable premium and other reasonable costs incurred in connection therewith as a debt due from the Supplier.

4 Evidence of insurance to be provided

- 4.1 The Supplier shall upon the Start Date and within 15 Working Days after the renewal of each of the Insurances, provide evidence, in a form satisfactory to the Relevant Authority, that the Insurances are in force and effect and meet in full the requirements of this Schedule.

The Supplier shall use all reasonable endeavours to notify the Relevant Authority (subject to third party confidentiality obligations) as soon as practicable when it becomes aware of any relevant fact, circumstance or matter which has caused, or is reasonably likely to provide grounds to, the relevant insurer to give notice to cancel, rescind, suspend or void any insurance, or any cover or claim under any insurance in whole or in part.

7 Insurance claims

- 7.1 The Supplier shall promptly notify to insurers any matter arising from, or in relation to, the Deliverables, or each Contract for which it may be entitled to claim under any of the Insurances. Call-Off Schedule 20 (Call-Off Specification)

This Schedule sets out the characteristics of the Deliverables that the Supplier will be required to make to the Buyers under this Call-Off Contract.

Introduction

Innovate UK is progressing on its journey to becoming a data-driven organisation. We have recognised the need to improve our Data Analytics Platform to enable us to progress our strategic objectives. Specifically we wish to design and deploy a consolidated data analytics platform which will hold both internal and external data and enable us to leverage both in our analytics and reporting outputs.

Context and background

There are a number of current data sources and integration tools which are required to be interfaced with this new platform to ensure it retains current and accurate data from the internal systems sources. Also external data feeds from a variety of providers will be integrated using our existing SIL (message bus) capabilities.

Analytics Platform Description

The analytics platform will be hosted in AWS in line with our strategy and other InnovateUK internal systems and is likely to be based on RDS PostgreSQL. The platform is intended to be flexibly scalable, resilient and highly performant as it will serve interactive Power-BI reporting systems across the organisation. Additional capabilities to utilise other analytics tools and systems in future is in scope of this project as well as integration of current deployed BI reports currently hosted on other and legacy platforms.

In addition we require an AWS data lake to be provisioned with supporting EC2 nodes to run python ETL processes against that datalake. Further expansion to include apache spark and apache kafka are considered likely in subsequent phases (not in scope for initial platform delivery) however note should be made of this and provision in design made accordingly.

What is needed for this project from the contractor?

This project will require close working with the Innovate UK data team, helping to develop capability within the Innovate UK team, as well as delivering the core deliverables of the tender. The main objective of this project is to design, build and deploy a fully operational data platform suitable for intensive query use from a large number of Power-BI dashboard users across the organisation. Additional data loads and automated analytics processes are required to interact with this data based on Python, and a variety of other AWS analytics tools including but not limited to SageMaker. Integration with Knime, Alteryx, Talend, Kafka, Spark and other transformation and ETL tools is also required.

Key Deliverables

The key deliverables from the contractor for this project are:

A confirmation of recommended DB platform (RDS PostgreSQL) or alternate recommendation with justification.

Design of platform to meet

- resilience objective of 24x5 uptime
- deliver all technical integration compatibility requirements stated above
- performance and capacity scaled to meet demanding OLAP access needs
- documentation of the platform and configuration
- documentation of the capacity and performance growth models
- documentation of routine administration and operational processes
- scope to include the analytics platform (postgresql), data lake, and supporting tools and ETL integrations

Implementation

- deployment of the aws datalake and data analytics database (postgresql)
- deploy the platform and bring to full operational readiness in collaboration with our devops team colleagues
- deployment to include all security group, integration tool and development and administrative tool access and testing such that the system is operationally ready for use
- full engagement of the Data & Analytics Team through the process
- training and support of the Data & Analytics Team on the new platform and handover of operational run books / operations processes to the team

Engagement

The delivery of the platform will require close working by the contractor with the Data & Analytics team as well as integration fully into our existing AWS infrastructure which is managed by the DDaT team within UKRI. Close direct working with both DDaT and Data teams will be required to deliver the solution.

Process

The project is proposed to be structured in 4 phases, each covering distinct activities and outputs. However, we do invite variations and advice around the delivery model of this project by respondents to help achieve the best outcomes within the project lifecycle.

- Design
- Build
- Test
- Operational Handover

This work will be carried out using hybrid working – both onsite and remotely via video conferencing and other online tools. We expect the contractor to attend a weekly progress meeting with Innovate UK and attend site for major deliveries, training and design workshop sessions at a minimum. The principal point of contact within the Innovate UK team will be within the Data team, with supportive involvement from the DDaT and PMO teams. We expect the contractor to integrate with the existing

teams on a day-to-day basis, working openly and collaboratively whilst making themselves available to join workshops and meetings as necessary.

We request a half day kick off meeting to develop a shared view of the aims of the project, to prioritise work, and agree initial deliverables. This should be led by the chosen contractor. We will also carry out a midpoint project review meeting, and a close out meeting to review and reflect on deliverables and learnings from the project.

Skills and expertise required

The external support should demonstrate capability and expertise in the following areas:

- The ability to work in an agile, flexible, and adaptable manner.
- A willingness to challenge ideas and demonstrate experience of achieving influence across the energy industry.
- Excellent written and verbal communication skills for engaging with others and delivering findings.
- **Technical understanding.** Up to date understanding of industry developments regarding data management, use, and analysis.
- **Specific Technical Knowledge.** AWS Aurora Postgres, RDS, MySQL, AWS database portfolio more broadly, AWS analytics and data lake services, ETL tools including some of Knime, Talend, Alteryx, WS02 others, stream and data tools including Kafka, Spark, and other related technologies. You will also have extensive experience of use of BI tools including Power-BI, Tableau, and other tools. Python, Java and current data manipulation development knowledge is also desirable.
- **Database Knowledge.** You understand the different types of database available and their relative advantages/disadvantages, you will have excellent data driven application experience both in front-end BI delivery and back-end analytics and information processing.
- **Understanding constraints.** You understand and can work within given constraints (including but not limited to technology, policy, regulatory, financial, legal, ethical, social, user constraints). You feel comfortable challenging constraints that can be changed. You know how to ensure compliance against constraints by adapting products and services where needed with a particular focus on data security and privacy concepts including data protection.

Worker Engagement Route (including IR35 status)

Where the Buyer has assessed its requirement is for resource, the IR35 status of the Key Roles must be detailed in the Specification.
