Objective 2: Collation and Presentation of indicator metrics and figures for report

4. Collate metrics from internal and external sources to populate indicators
5. Develop a confidence and ecosystem-relevance rating approach for metrics
6. Develop presentation options for indicator figures with reproducible methods
7. Produce a report cataloguing the approaches taken and presenting the results

While Objective 1 outputs will feed into Objective 2, delivery of these two objectives will need to run in parallel.

This work will therefore include elements of data exploration and analysis, as well as sourcing figures, collaborative decision making with NE, and presenting data for a report format. It will also produce a visual key for non-technical audiences, communicating levels of confidence and relevance to ecosystems within each respective broad ecosystem chapter. Finally, this contract should provide a list of metrics ready to populate a SONC Report, and present options for displaying indicators which can be used in the SONC Report.

The outputs from this contract should be presented in a consistent, clear, and understandable format to meet publication standards, and allow an analyst to independently re-run analysis in-house for future datasets. We will require a clear record of all decisions behind metric selection, and necessary guidance for access of metrics, both for reference for future SONC reports and for fielding enquiries from third parties and stakeholders.

(b) Objective 1: Task Descriptions

TASK 1: OBTAIN DATA

We have 5 indicators ([Annex 1](#)) of quantity and quality of natural capital across England, for which we have identified metrics and data sources (see Annex 2 for further detail);

- Saltmarsh Extent and Zonation
- People And Nature Survey (PANS)
- Green Infrastructure database

Obtain access to these data for analysis and metric production (see [Task 2](#)):

- Follow established NE procedures for data access and use, including use of the data tracker ([Annex 2](#)).
- Correspond as needed with internal NE parties (e.g. requesting data access, clarification)

TASK 2: ANALYSE DATA

This task will analyse datasets from Task 1 to produce values for the metrics set out in Annex 1.

- Develop and test reproducible methods to produce values from spatial and non-spatial data
- Run all analysis in R to ensure methods are robust, repeatable, internally QA'd and ready for NE Quality Assurance
- Final values should be presented in a clear format in an Excel spreadsheet, including information on data gaps and caveats
- Consult with NE team to adjust metric wording as needed during data exploration and analysis, and record all decisions throughout the process

TASK 3 – PRODUCE OBJECTIVE 1 REPORT

Briefly summarise methods, results and learning from Task 2:

- The report produced in this task should contain; Introduction/Background, Technical Methods, plain English Methods, Results, Decisions and Limitations

(c) Objective 2: Task Descriptions

TASK 4 – COLLATE INDICATOR VALUES

This task will produce a final list of metrics and values for the indicators within the SONC report, as well as report on alternative options, and limitations of the final metrics.

We have 165 indicators of quantity and quality of seven broad ecosystems (see Annex 5) for which we want to check metrics, collate values and produce graphics.

Values will be collated from three main sources:

- Published metrics and reports such as Water Framework Directive (WFD) where indicators are published as part of the [State of the water environment indicator B3: supporting evidence – GOV.UK \(www.gov.uk\)](#) in the [Outcome Indicator Framework for the 25 Year Environment Plan \(defra.gov.uk\)](#), which can be used directly in the SONC report;
- Two previous data analysis contracts run by NE using data from SSSI, Living England, and UKCEH Countryside Survey data to develop metrics and figures for certain indicators

- Outputs from Objective 1 of this contract when they are ready.

There is considerable repetition between indicators which significantly reduces the volume of work to be done:

- Many of these indicators are repeated across ecosystems (e.g. Density of Public Rights of Way for each broad ecosystem) and so come from a single source.
- Many of the metrics identified can be reported from the same database (e.g. from the [Outcome Indicator Framework](#)).

a. Collate values for all indicators in Annex 5

- Access data sources linked to indicators (Annex 2, 'Collation' tab)
- Where necessary, and with knowledge of the NE team, contact external parties (i.e. data owners and specialists) for clarification on data and metric interpretation
- Consider queries or limitations already flagged by the project team for each indicator (to be provided at the outset of the contract)
- Check or propose appropriate metric(s) and value(s), including alternatives and limitations where these exist. Record in a spreadsheet form based on Annex 6.
- Record and share any guidance on accessing the metric, or observations relevant for repeats of this work for future reports
- Record all licence information in the Data Tracker provided (Annex 2) to enable NE to publish the figures
- Record additional information pertaining to confidence and ecosystem relevance after establishing an agreed approach in Task 5, such as:
 - Whether it is only a partial representation of the broad ecosystem, noting gaps
 - For unpublished metrics, sample size and methodological limitations

b. Fortnightly presentation of metrics and values to NE team for checking

Collaborate closely with the NE team, presenting batches of collated metrics and values for the NE team to check and agree the final metrics and values to be used in SONC.

- Present metrics and values for indicators, including alternative options, to the NE team in an agreed format, highlighting where there are uncertainties or limitations
 - Collated metrics and values to be presented in batches every two weeks at working group meetings, with the first batch expected w/c 21 August. The NE team providing guidance on which indicators to prioritise
- Review a limited number of published reports and metrics such as [Outcome Indicator Framework for the 25 Year Environment Plan \(defra.gov.uk\)](#) and [CEH Soils Report](#) (list to be agreed with the NE project team) and flag any discrepancies between our proposed indicators and those already published.
- Record all decisions on individual metrics and values, and the rationale, and summarise alongside the final values in the spreadsheet

- Record further detail (i.e. communications, links, extensive comments, key decisions) in a final report as agreed with the NE team

TASK 5 - DEVELOP CONFIDENCE AND RELEVANCE RATING

This task will establish criteria for scoring confidence in the robustness of metrics selected and for indicating the degree of relevance to the broad ecosystem that it relates to.

a. Develop a confidence and habitat-relevance rating approach

- Propose scoring criteria to reflect how comprehensively an indicator relates to the broad ecosystem it represents (e.g. reflecting if it only represents a subset of habitat) and scoring criteria to reflect the robustness of unpublished metrics using RAG status
- Present the rating approaches, with examples, to the NE team and get agreement for the approach.
- Provide a technical and plain English method, which can be inserted in the SONC report

b. Apply the rating approach to all indicators from Task 4

- Apply the agreed approach to all the indicators using information gathered during value collation

TASK 6 - DEVELOP INDICATOR GRAPHICS

This task will produce graphics for selected indicators (approximately 100 in total), based on metrics and values collated in Task 4, in addition to methods to reproduce them in-house. NE will select the indicators for inclusion in this task. Graphics should be produced in an automated way, preferentially in R.

- Initially provide example graphics for a small number of indicators to get agreement from the NE team on a consistent approach
- Develop and propose graphics to represent key indicators in the SONC report for clear communication to a non-technical audience – see Annex 7 for an example graphic template.
- Present graphics alongside proposed metrics at fortnightly meetings to NE team for comment
- Consider any existing published graphical representation of indicators (e.g. in [State of the water environment indicator B3: supporting evidence - GOV.UK \(www.gov.uk\)](https://www.gov.uk/state-of-the-water-environment-indicator-B3-supporting-evidence)), and record case licence information as needed.
- Create the graphics using R, and internally QA ready for NE Quality Assurance
- Share the code with accompanying technical and plain English instructions in a separate written document
- In-house NE analysts should be able to reproduce the graphic outputs from this task for the same indicators in future SONC reports

TASK 7 - PRODUCE OBJECTIVE 2 REPORT

This task will pull together all previous report section outputs from Tasks 4-6 to create a single report, covering indicator collation, a scoring framework and graphic production.

- Write a brief background section summarising the work done and relevance to the SONC report
- Bring together outputs from:
 - Task 4.b: Present batches of metrics and values fortnightly for checking and record decisions

- Task 5.a: Develop a confidence and ecosystem-relevance rating approach
- Task 6.c: Report methodology and decisions for graphics
- Task 6.d: Produce graphics for indicators
- Format the report to be presentable and clear to new, non-specialist audiences
